Introduction

- The Document Management System (DMS) is mainly used to maintain a centralised web-based database for the purpose of maintaining and tracking E thapals or letters.
- This DMS application will be web accessible with user accounts for each user to login and edit their own profiles information based on some admissible criteria.

Problem Statement

- **As unorganized content makes it difficult for larger organizations to extract business-related information and use available data,DMS proves very effective in overcoming these challenges.**
- 

Modules Completed

- Feeding provision for each communication.
- Login module.

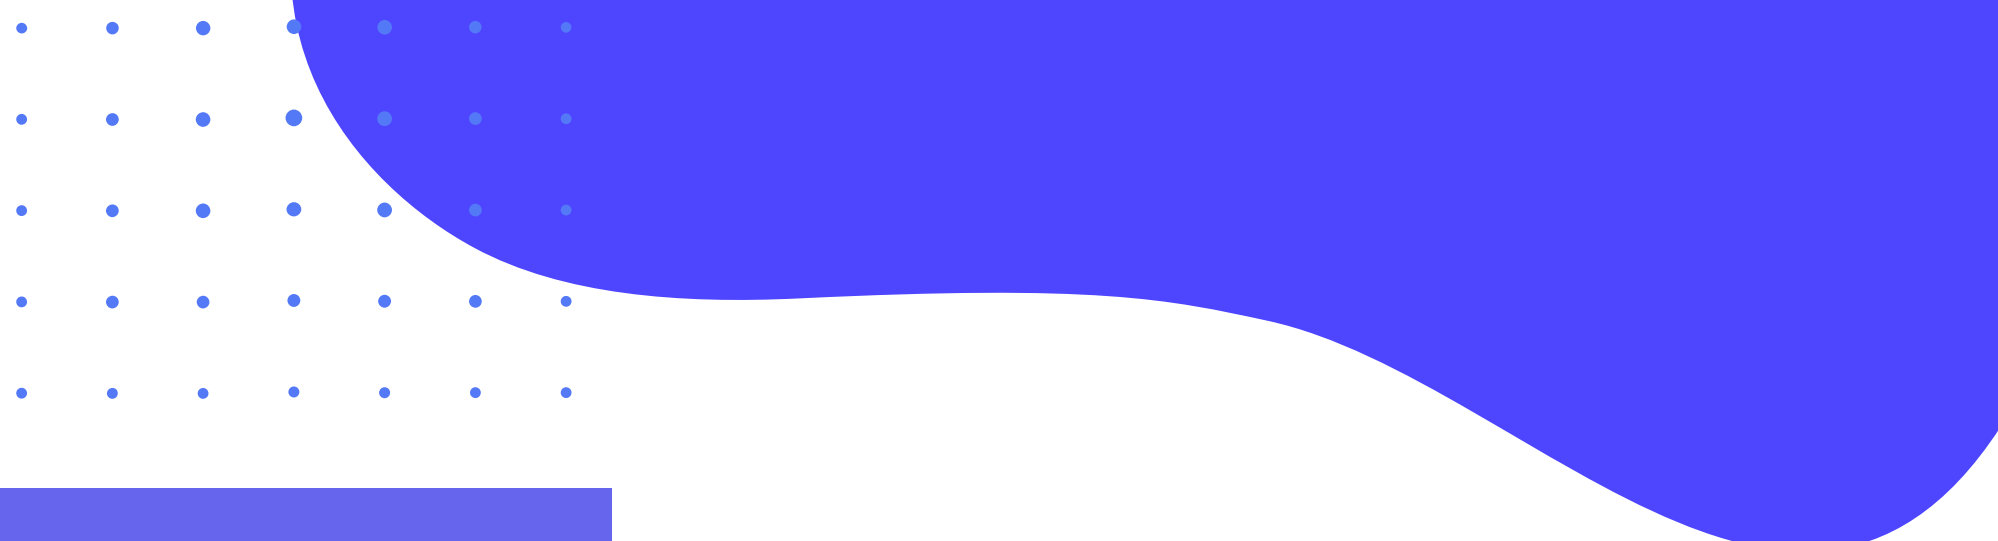

Modules to be Completed

- Status Tracking provision for each letter.
- Tracking of files using unique code (Bar Code).
- Reminders and alert notifications.(partially completed

Partially Completed

- Communication Module-SMTP error
- Notification Module-Styling
